

Ambilight Media Player Installation Guide

Since the PyQt5 components we used while developing the program work with the Lav Video Codec, we recommend installing the K-Lite Codec Pack before using the program. You can access it from the link below: https://codecguide.com/download_kl.htm

At the same time, our program was designed using the Yeelight lamp. Before starting to use the lamps, they must be introduced to the network. At the same time, LAN control modes must be turned on. You can check [website](https://www.yeelight.com/pages/faq.html#/en_US/yeelightapp) and learn how to connect devices to Yeelight App.

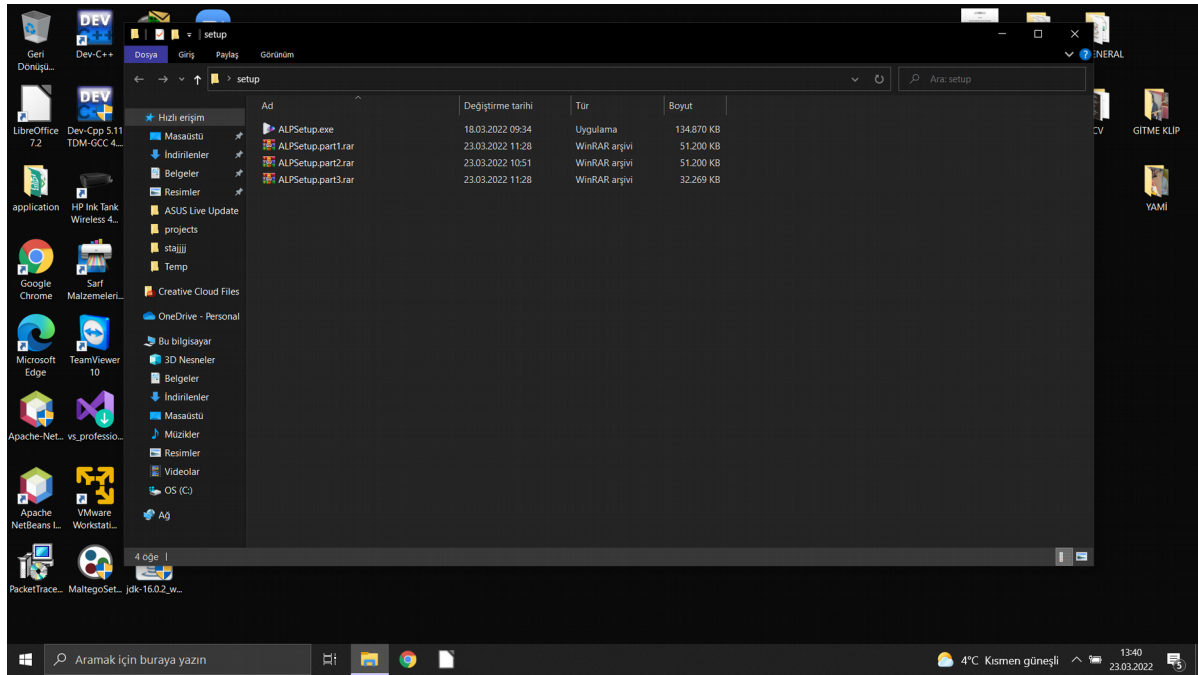

Fig.1 ALPSetup

You have to open ALPSetup.exe.

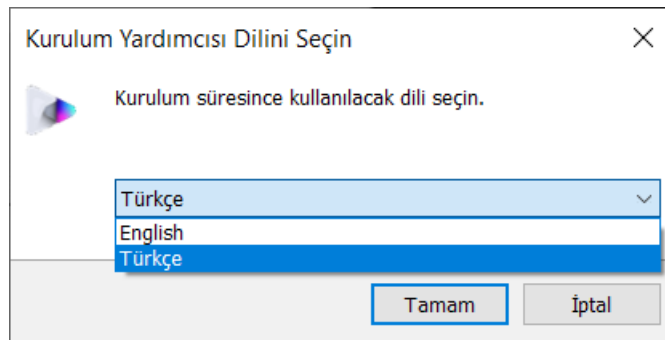

Fig.1.1 ALPSetup

After double-clicking on it, the screen you see in the Picture appears. Language option is also available during installation. Here we select the language and click OK(Tamam).

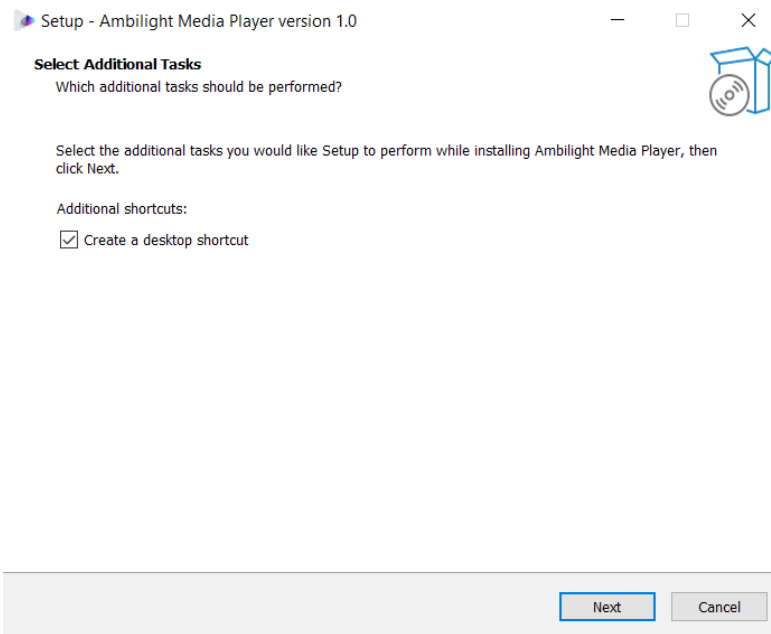

Fig.1.2 ALPSetup

If you want it to appear on the desktop, click on Let ambilight media player appear on the desktop as you can see in the picture.

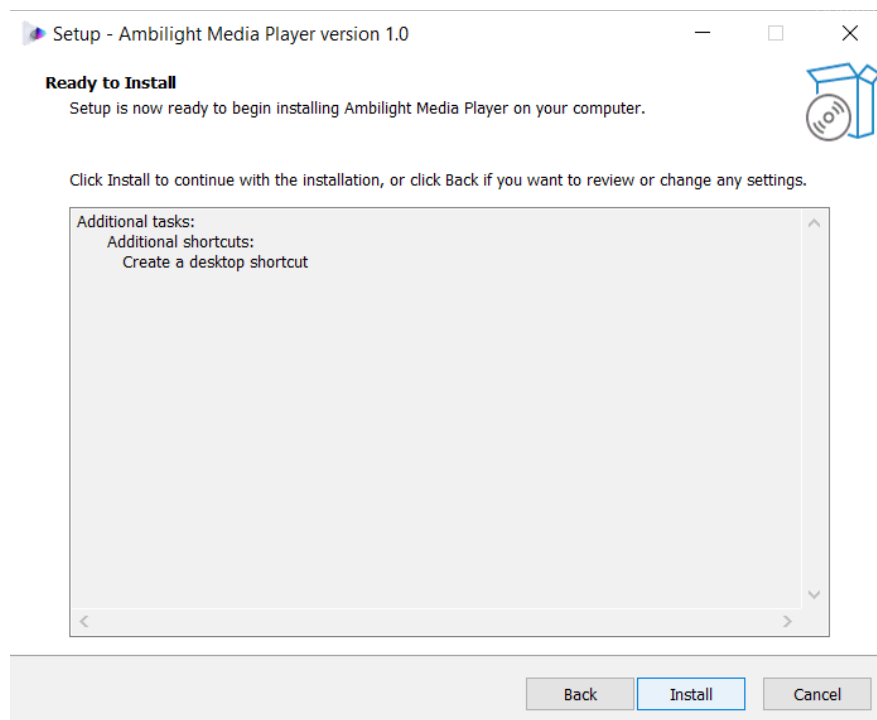

Fig.1.3 ALPSetup

You have to click install.

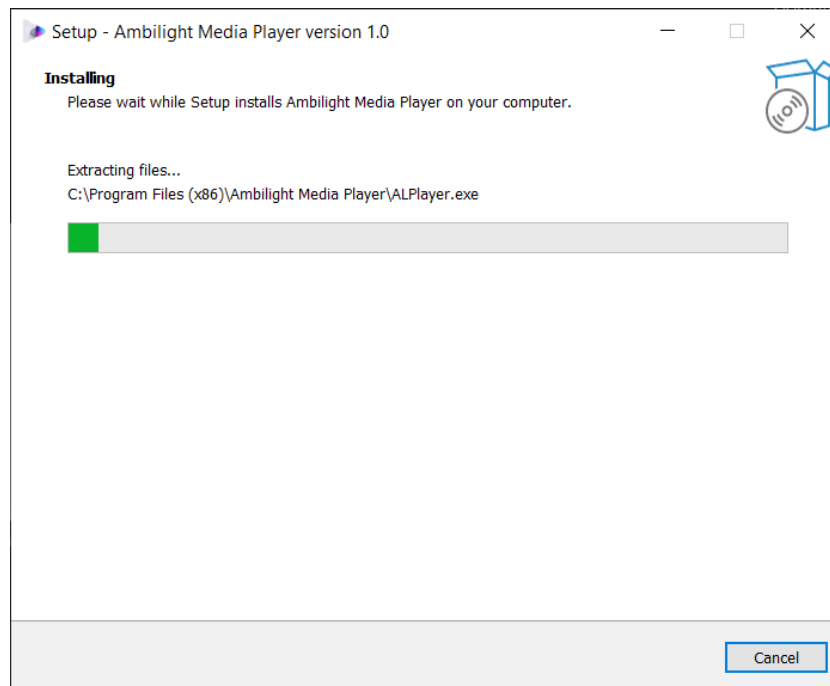

Fig.1.4 ALPSetup

It will then install. Please wait until the installation is finished and do not close the window.

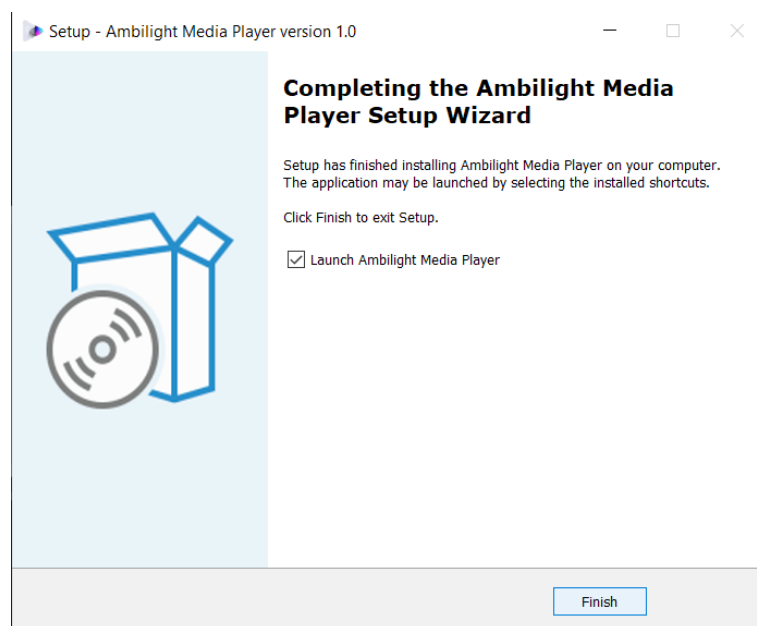

Fig.1.5 ALPSetup

The installation is done.
